New Lead-Free Web Magazine Introduced

10-24-2003 -- Atlanta, GA

A new lead-free resource has been introduced to the electronics assembly industry. LeadFree Magazine.com is dedicated to helping companies in the transition to lead-free assembly.

The Web magazine will be delivered to subscribers' inboxes four times a year. The magazine will cover various aspects, including lead-free topics, products and testing. Additionally, the magazine will explore the effects the lead-free transition will have in the manufacturing process.

LeadFree Magazine.com is produced by a consortium of lead-free companies in the industry: Aqueous Technologies, Creative Automation, EPM-IBL, KIC, Kyzen, Kester, Metcal, Milara, Polyonics and Tyco Automation. Each contributing company will provide a different and individual perspective into the transition to lead free. The magazine will include perspectives from Europe and Asia, is free of charge and will have no advertising associated with it.

To subscribe, visit the site and provide your contact information.
