### Polyonics Introduces New Newsletter

(September 29, 2003) Westmoreland, N.H. — Polyonics Inc. has introduced a new electronic newsletter to the electronics assembly industry.

The monthly resource, named "Label Interfaces" is delivered to subscribers' inboxes and features insights and useful solutions relating to electronics labels and marking. Best described as being dedicated to the art and science of industrial marking and product AutoID, the newsletter highlights one current hot topic or opinion per issue. For example, the kickoff newsletter discusses ESD-safe barcode labels: who needs them and why.

The newsletter opens with a look at the given topic, describing key aspects and providing solutions to common difficulties related to the highlighted topic. Polyonics President Jim Williams provides the information, based on his extensive industry expertise and know-how. Additionally, readers are encouraged to interact with the discussion by e-mailing any thoughts or comments to [newsletter@polyonics.com](mailto:newsletter@polyonics.com).

Also included is a look at various Polyonics Inc.'s key products that relate to that month's newsletter topic. Descriptions and attributes are discussed for each product.

For more information, visit <http://www.polyonics.com/>.
