RoHS Compliance Certified Label Materials

The Restriction of Hazardous Substances (RoHS) initiative has been a challenge for many manufacturers to know for sure if the products they are receiving are in compliance. Now that RoHS is being enforced this knowledge is more important than ever!

The risks of noncompliance can include lost revenue, fines and damage to both customer relations and brand reputations.

How can you be sure that your label products are in compliance? Polyonics, can help answer that.

Unlike our competitors, Polyonics test each **INDIVIDUAL** lot of material using X-Ray Fluorescence Spectrometry (known as 'XRF') to assure our material complies with the provisions of the [RoHS Directive 2002/95/EC](#). We send you the documentation to prove it with each lot shipped! This takes the question of **compliance of the labels** out of the equation for both you and your customers receiving labels made from Polyonics material.

With the growing list of global restricted substance regulations, Polyonics continues to work hard to make it simpler for you to do business and know you're getting quality, compliant product.

Polyonics is a worldwide leader in harsh environment label materials designed to reach extreme temperature associated with printed circuit board applications in the electronics industry.

To learn more about Polyonics', RoHS compliant label materials visit us at www.polyonics.com/elec.html
